

A Service that puts you in the driving seat

Inside our multi-function hall separate areas are assigned for specific purposes:

- A 40 metre long cryo-track with inspection pit
- A motor vehicle area with inspection pit and brake-testing stand
- A multi-purpose area including service facilities for containers
- Paint application and preparation rooms including pit, modern paint application equipment and explosion-proof room
- Secure rooms for cryo-, electrical and welding work

All partitioned areas are transversed by two crane installations.

G.E.S. - stands for a service that will do you a power of good. Our G.E.S. workshops in Oberhausen and Geusa offer virtually any service you could ever require for tankers and containers, particularly gas transporters. However, we also cater for articulated lorries, motor vehicles and stationary storage tanks. See for yourself:

STATE OF THE ART TECHNOLOGY - WHY SETTLE FOR LESS?

Built in 2001, our modern workshop in Geusa boasts a floor area of 2,000 square metres, accessible through 12 gates. The capacious hall is complemented by an additional 7,000 square metres of open space, to provide optimum facilities.

ALL IN ONE – ALL FOR YOU

In our 'explosion-proof' hall, maintenance and repair work is carried out on ADR class 3 vehicles, e.g. hydrogen carrier vehicles. The cryo track is a separate entity, where all maintenance and repair work required in the gas sector is carried out efficiently and to perfection. Cryo storage containers for CO₂ and nitrogen are available to provide cooling for "hot" cryo equipment and for calibration purposes. Furthermore, the workshop facilities include vacuum pumps and helium leakage testing appliances as well as crane installations, crane truck, a folding press and shears.

QUALITY - FROM A TO Z

Our experienced and highly motivated team consists of creative technicians, electronics and hydraulics engineers, electricians, highly skilled welders, gas / cryo specialists and experts in the field of vehicle and

body construction. Together, the exemplary commitment and performance displayed by all our employees and the logistics-orientated design of our multi-function areas provide optimum efficiency and a perfect service for all our clients. All workshops are certified in accordance with EN ISO 9001 and SN EN ISO 14001 by Bureau Veritas Quality International.

EFFICIENCY TO CUT STOP-AND-GO

Our clients also benefit from existing networks and well-established, tried and tested structures, which are accessible at all times. Operated to the highest economic as well as ecological standards, the location of our Service Centres ensures an optimum coverage of the German market. The advantage: Several maintenance and repair tasks can be carried out simultaneously, without the need for long periods of downtime. For example, dismantled pumps and machinery can be inspected and repaired while painting work is being carried out.

REST ASSURED

For your optimum safety and peace of mind our round-the-clock repair and emergency service is at your disposal - for deployment both in Germany and abroad. Our range of services is rounded off by comprehensive maintenance and repair facilities for fittings on tanks and tankers, inspection facilities for all vehicle equipment items as well as all required periodic inspections.

PUT US TO THE TEST - WE ARE THERE FOR YOU - NIGHT AND DAY!
