

Logistics without borders

Reaching worldwide destinations

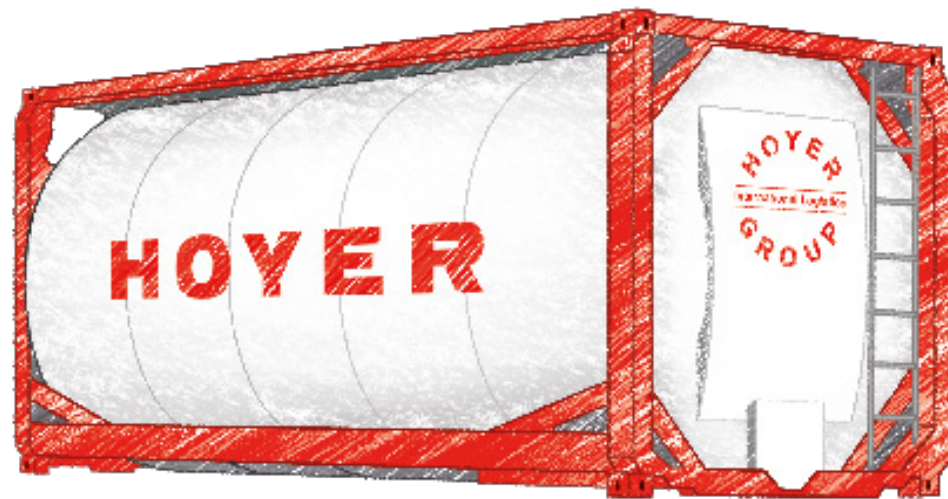

The international logistics company HOYER is a worldwide market leader in moving liquids by road, rail and sea. Wherever they may go, HOYER will get chemicals, foodstuffs, gas and mineral oil to their destinations safely and efficiently in tank containers, road tankers, flexitanks and intermediate bulk containers (IBCs). HOYER also has numerous logistics facilities with depots, cleaning stations and workshops. More than 80 representative offices and 5,000 employees throughout the world ensure a reliable and smooth transport process. HOYER is organised in business units that cover a variety of product and service areas and thereby always guarantee the right logistical solution for every requirement.

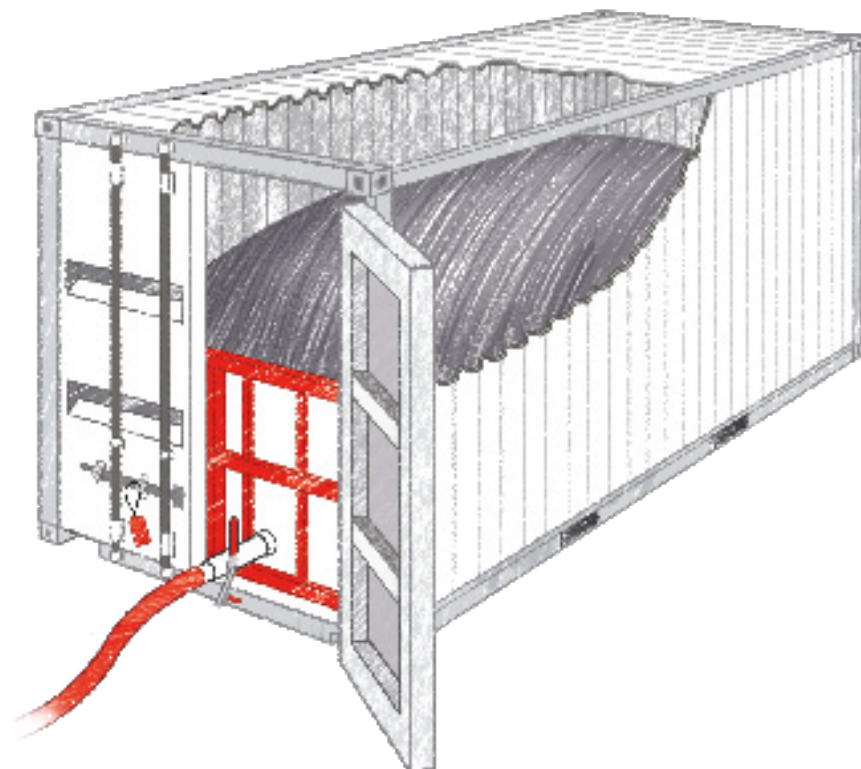

The Deep Sea business unit is responsible for the HOYER Group's overseas activities and transports liquid chemical products, foodstuffs and gases around the world. Deep Sea knows no boundaries. The business unit is as active for its customers in remote areas as it is in large, pulsating capitals of commerce. Deep Sea is present in Singapore, São Paulo, Dubai, Houston, Shanghai and Rotterdam, from where it coordinates its global transport operations. Every location is handled with optimally selected transport containers such as tank containers, flexitanks and IBCs. The customers' fields of business and logistical requirements are advancing continuously. Thanks to its international network and state-of-the-art equipment, Deep Sea always provides the ideal solution and can respond flexibly and quickly to all of the customers' wishes.

Technically up to date

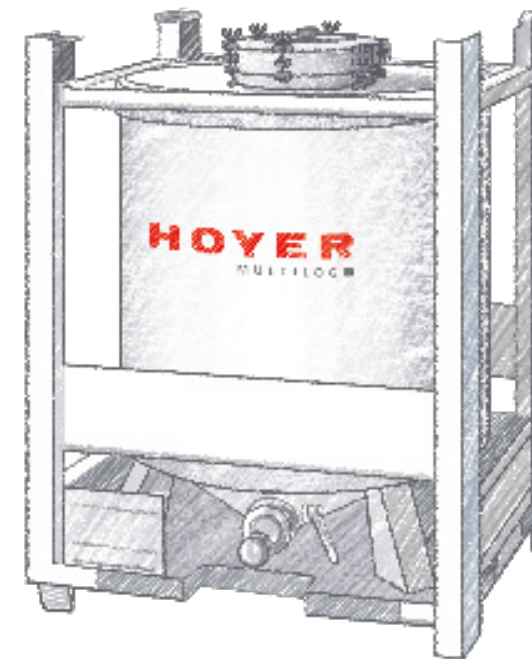

The Deep Sea fleet consists of over 20,000 tank containers. All of the tanks are optimally insulated and have the option of steam heating. In addition, customers can choose between different sets of special equipment. These include, amongst others, tank containers for temperature-controlled transport operations and tank containers with baffles or various types of linings. Deep Sea also offers numerous IBC types and has flexitanks that it manufactures itself. At the request of the respective customer, the transport equipment can be equipped with GPS tracking devices.

The tank container fleet is made up primarily of standardised types; however, special tanks are developed to meet individual customer preferences.

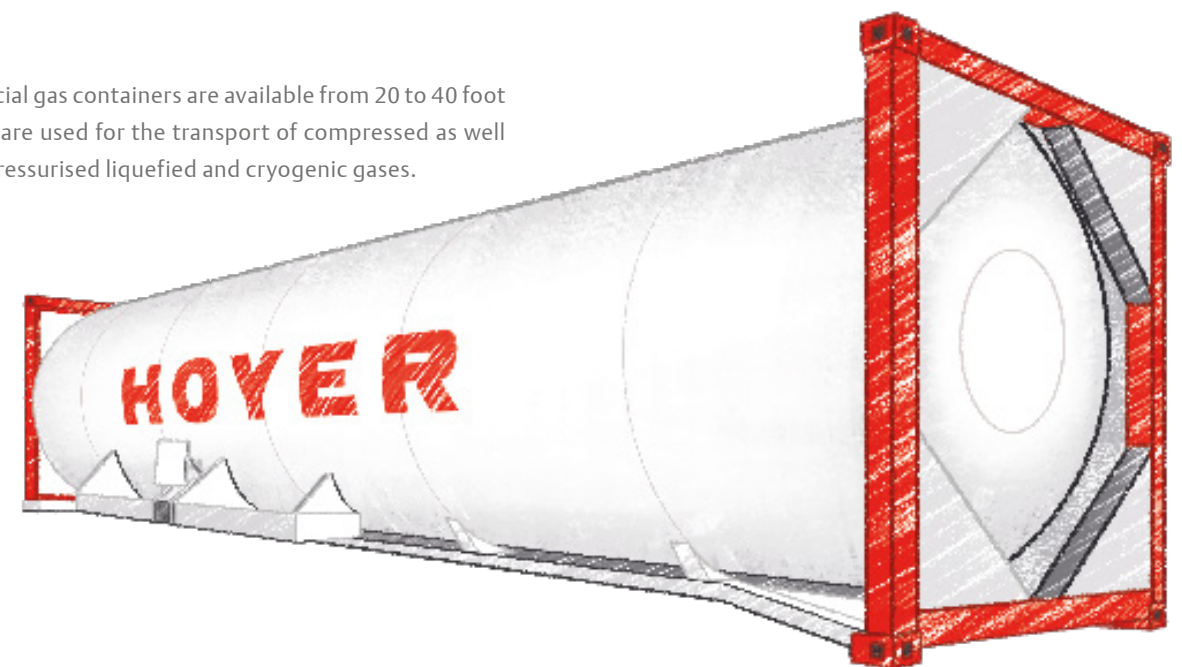

Flexitanks have a capacity of 16 to 24 cubic metres and are particularly well-suited for transporting liquid non-hazardous chemicals and foodstuffs.

IBCs are the ideal alternative to drums and road tankers when transporting liquid products and have a capacity of 500 to 1,000 litres.

Special gas containers are available from 20 to 40 foot and are used for the transport of compressed as well as pressurised liquefied and cryogenic gases.

Every product has its own unique attributes. The chosen transport solution must be just as individual, with the right equipment playing a decisive role in this process. The Deep Sea business unit has access to its own database containing tens of thousands of products, on the basis of which it always structures a suitable logistical concept for the respective goods. With its supply chain solutions (SCS), moreover, Deep Sea offers extensive value-added services for the chemical industry. The SCS service portfolio covers on-site logistics, the filling and blending of liquid chemical products, the operation of intermodal and dangerous goods terminals as well as dry-bulk logistics. All services are offered in their entirety and are bundled so that synergies are generated for all customers.
